

Supplemental Figure 1: The human leukocyte antigen class I (HLA-I) expression in the liver and kidney of diabetic model rats. The HLA-I expression level was examined by RT-PCR analysis and all tissues were from model rats treated with hMSCs-UC. Left panel: HLA-I expression in liver; right panel: HLA-1 expression in kidney. (M), (DF), (L), and (K) were presented as maker (200 bp), diabetic foot, liver, or kidney, respectively.
