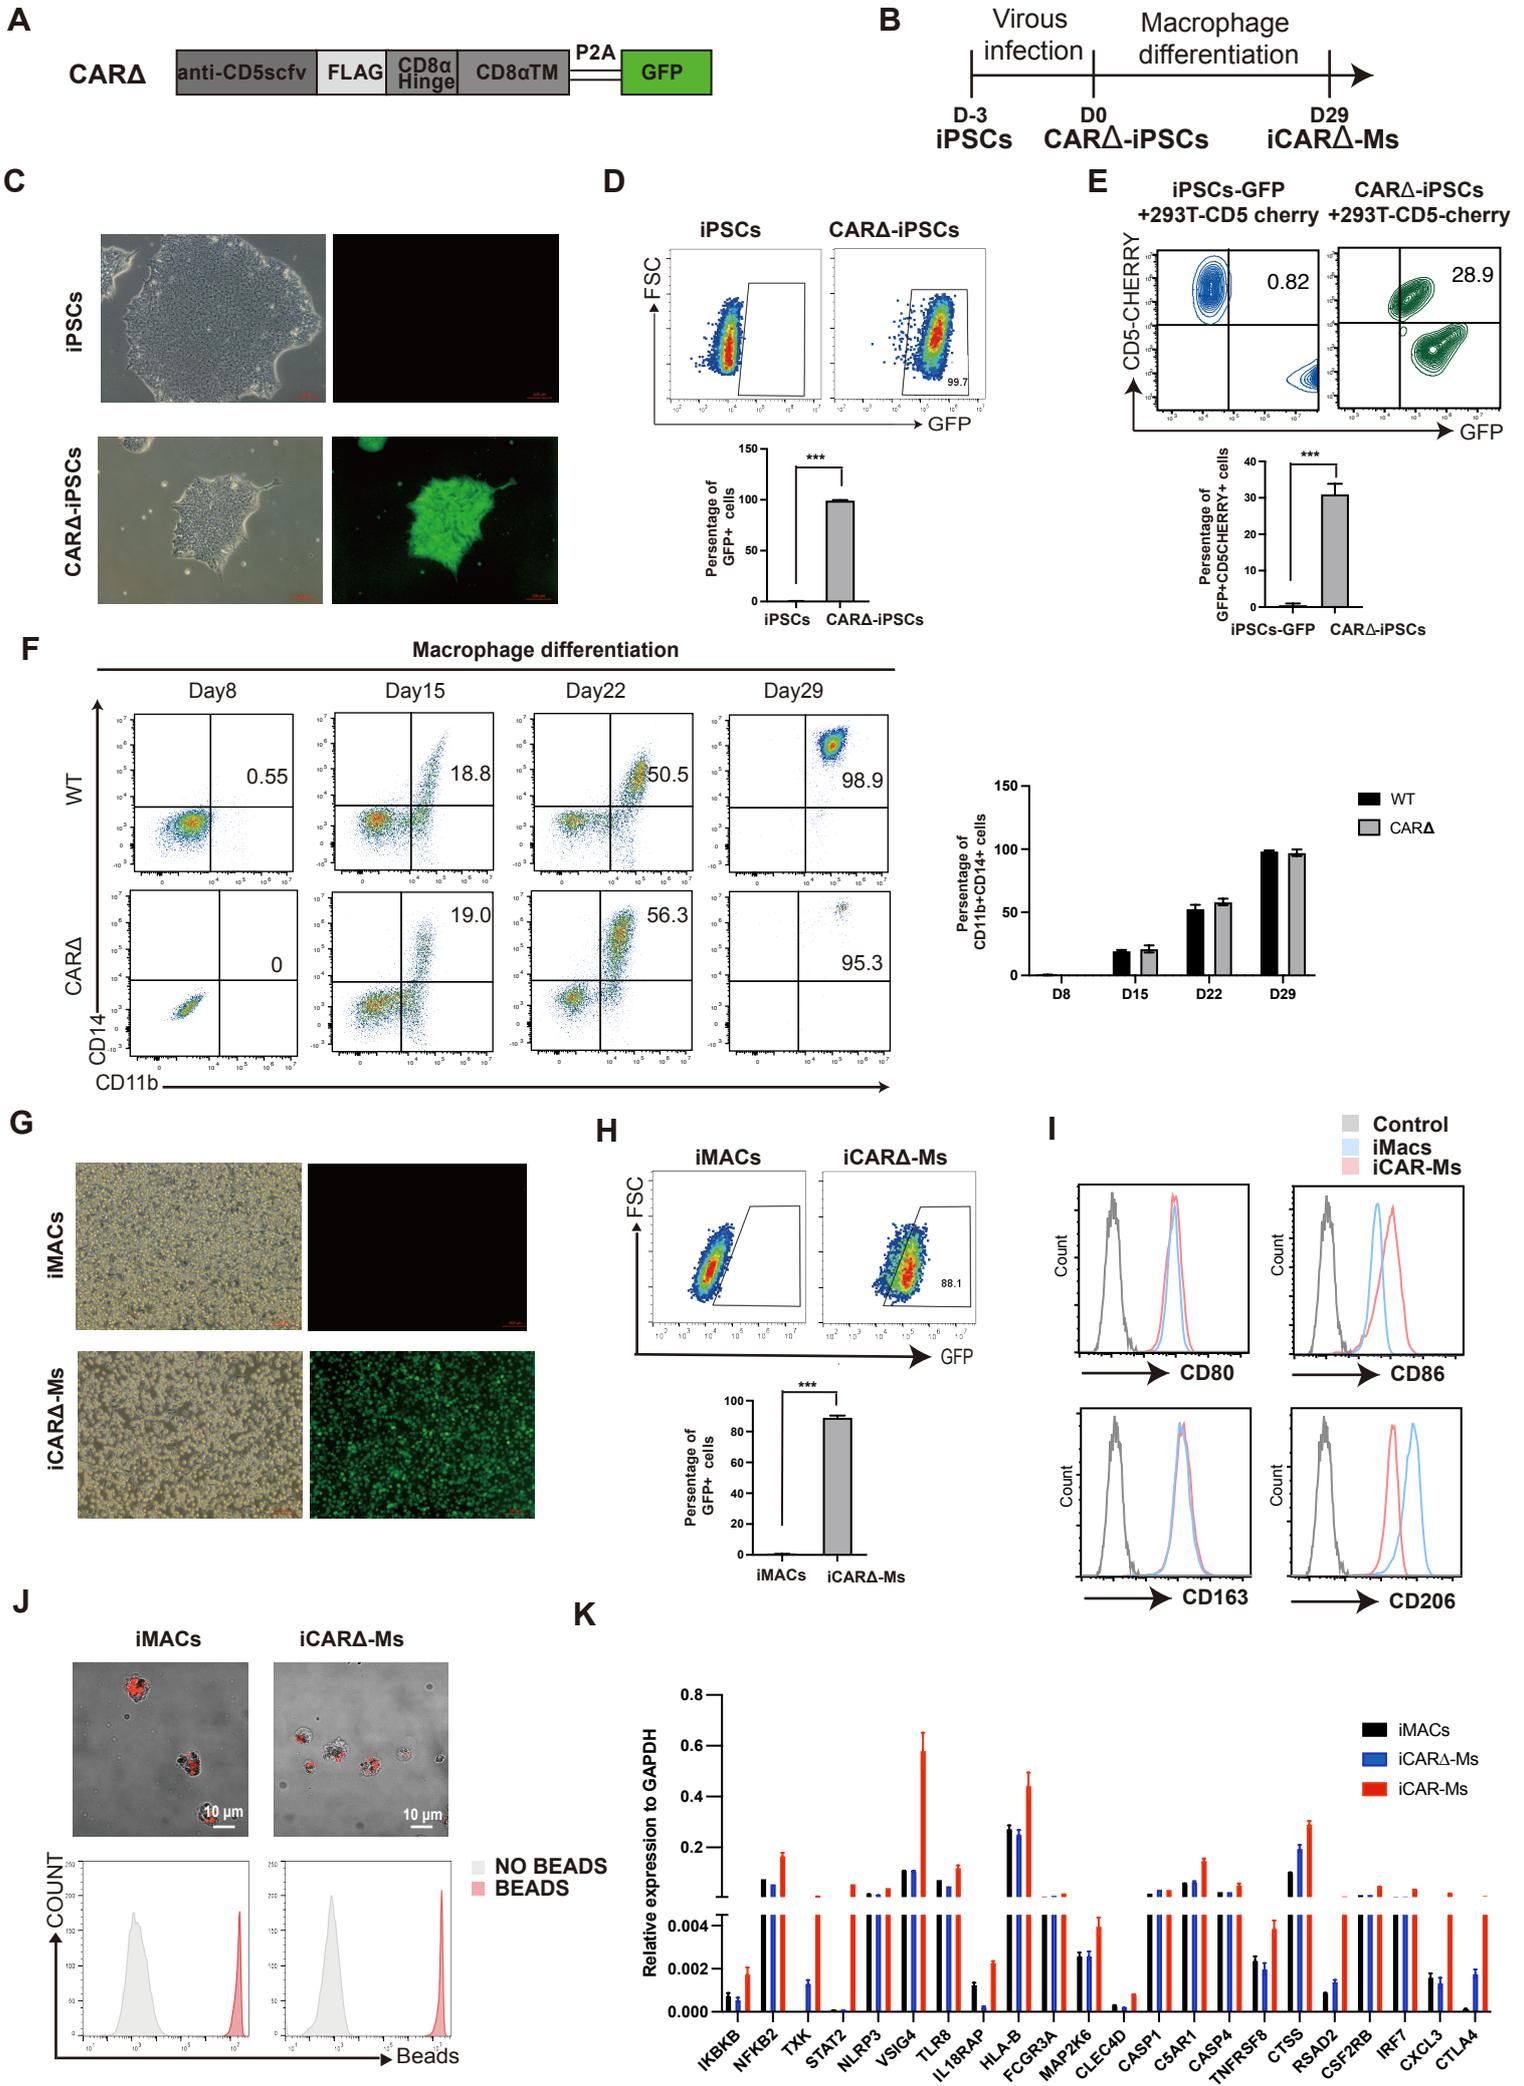

Figure S1. Generation of human iCARΔ-Ms targeting CD5. (A)Schematic representation of CARΔ constructs with CD5-targeting. (B) Schematic strategy for generating anti-CD5 CARΔ-Macrophage from human iPSCs. (C) The morphology and green fluorescent protein expression on indicated cells, Scale bar: 100μm. (D) FACS analysis of the iPSCs and GFP $^+$CARΔ-iPSCs. Statistics was determined using unpaired two-tailed Student's t-tests, ***p < 0.001. These data represent mean ± SD from three independent replicates (n = 3). (E) FACS analysis of the GFP $^+$CARΔ-iPSCs and CD5cherry $^+$293T-CD5cherry in coculture for 24h. Statistics was determined using unpaired two-tailed Student's t-tests, ***p < 0.001. These data represent mean ± SD from three independent replicates (n = 3). (F) FACS analysis of the indicated markers during macrophage differentiation. These data represent mean ± SD from three independent replicates (n=3). (G) The morphology and green fluorescent protein expression of indicated cells, Scale bar: 100μm. (H) FACS analysis the indicated macrophage markers in mature iMACs and iCARΔ-Ms. Undifferentiated human iPSCs serve as control. Statistics was determined using unpaired two-tailed Student's t-tests, ***p < 0.001. These data represent mean ± SD from three independent replicates (n = 3). (J) Engulf of red fluorescent latex labeled beads by iMACs and iCARΔ-Ms phagocytosis examined by confocal microscopy (left) and FACS. Scale bar: 10μm. **(K)** RT-qPCR analysis of the indicated gene expression of the iMACs, iCARΔ-Ms and iCAR-Ms cells. These data represent mean ± SD from three independent replicates (n = 3).
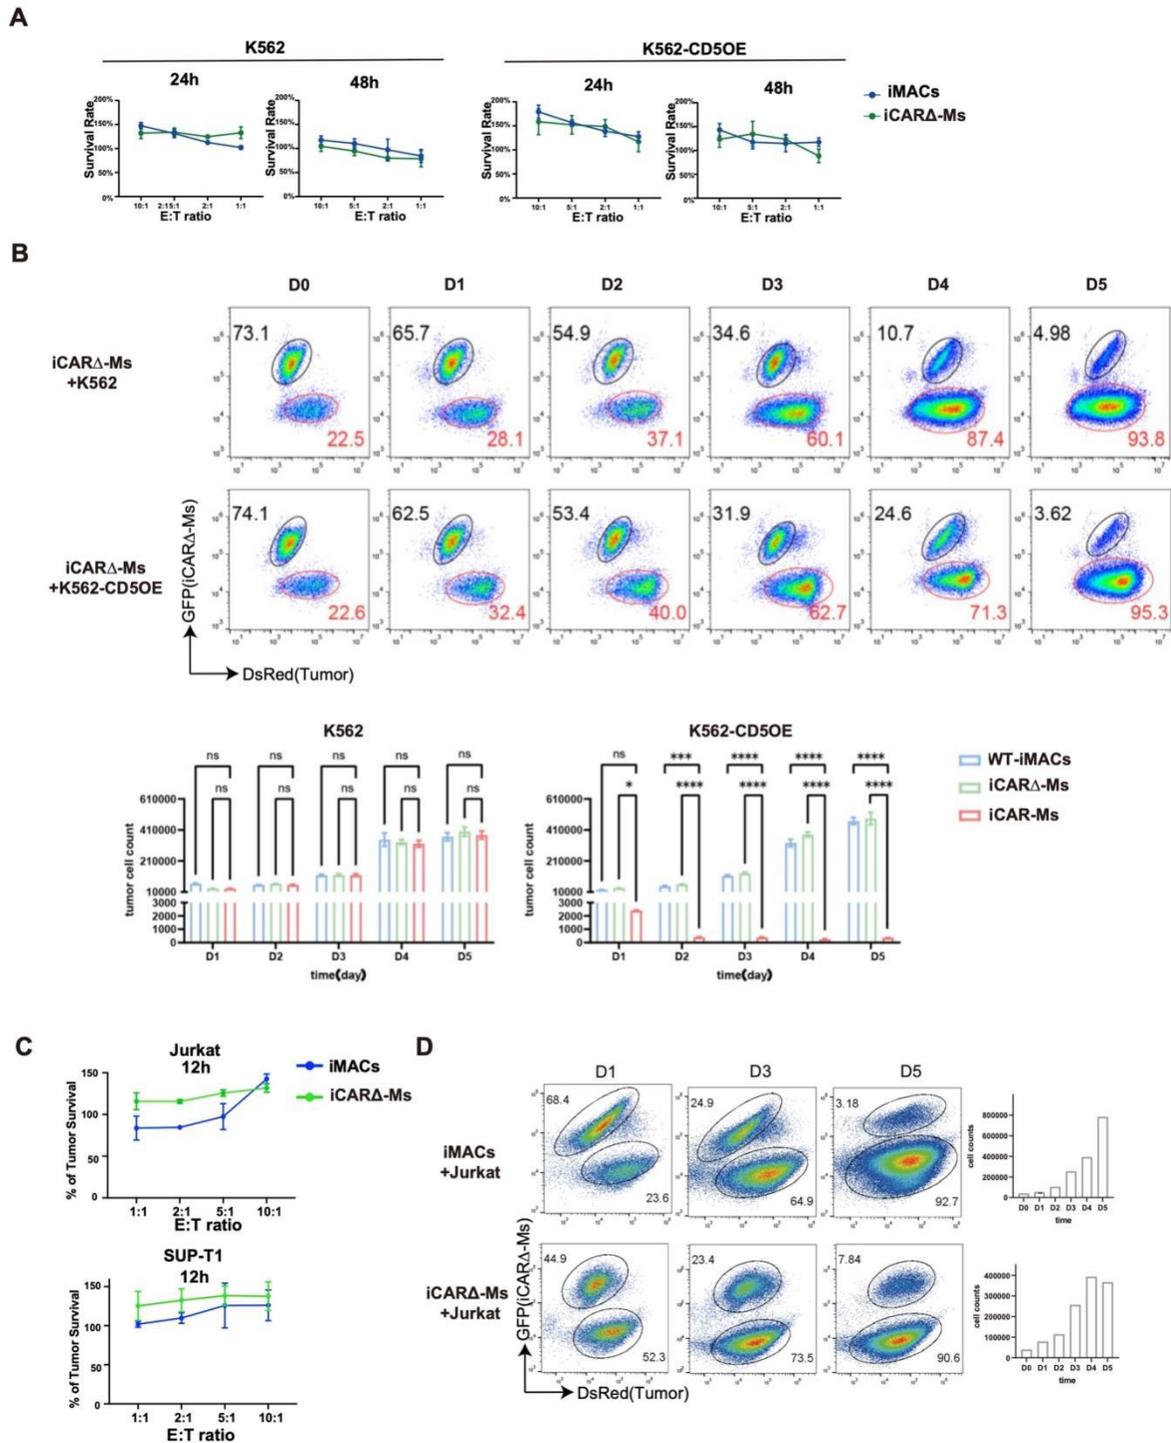

Figure S2. (A) Killing assay of indicated tumor by iCARΔ-Ms or iMACs at indicated E:T ratios. These quantitative data represent mean ± SD from three independent replicates (n=3). (B) FACS analysis of DsRed+ WT K562 or K562-CD5OE cells with iCARΔ-Ms(top). The remaining tumor cells were counted at indicated time point during co-culture(bottom). Statistics was determined using unpaired two-tailed Student's t-tests. These data represent mean ± SD from three independent replicates (n = 3). (C) Killing assay of indicated tumor by iCARΔ-Ms or iMACs after 12h of co-culture at indicated E:T ratios (bottom). These quantitative data represent mean ± SD from three independent

replicates (n=3). **(D)** FACS analysis of DsRed$^+$ WT K562 or K562-CD5OE cells with iCARΔ-Ms. The remaining tumor cells were counted at indicated time point during co-culture.
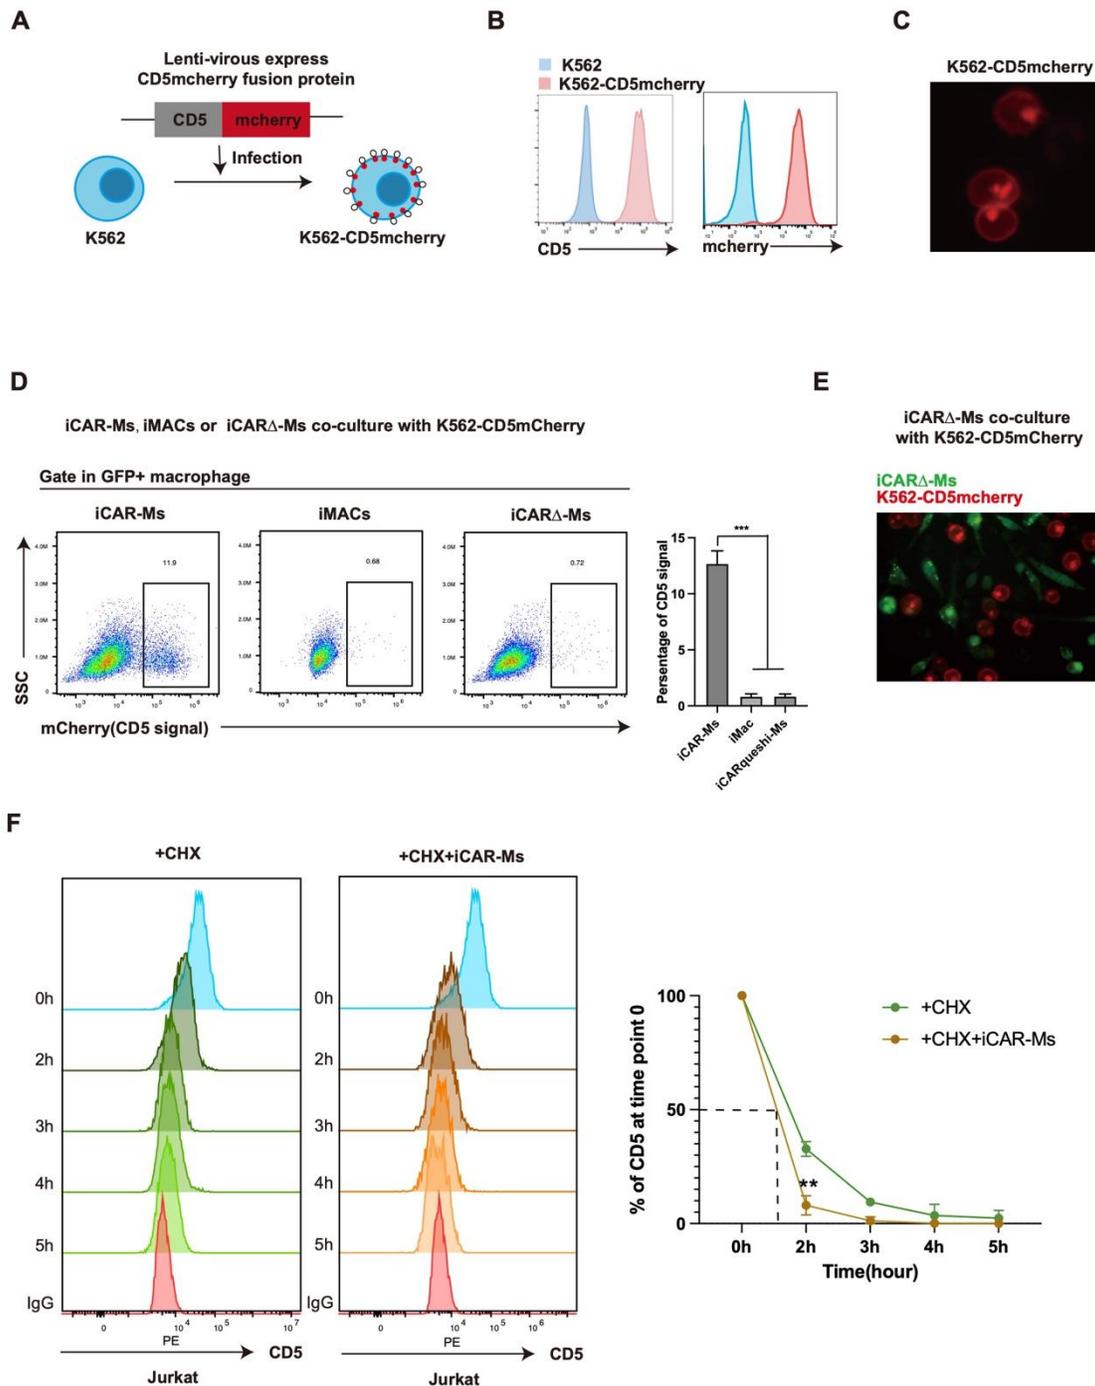

**Figure S3. (A)** Generation of K562 cells expressing CD5-mcherry fusion protein. Schematic representation of experimental design. **(B)** FACS analysis of CD5 and mcherry expression on K562-CD5mcherry, WT K562 as control. **(C)** Confocal analysis of mcherry expression on K562-CD5mcherry, Red, mcherry. **(D)** FACS analysis of mCherry⁺ CD5 of iCAR-Ms, iMACs and iCARΔ-Ms after co-culture with K562-CD5mCherry. **(E)**

Fluorescence microscopy images of iCARΔ-Ms and K562-CD5mcherry after co-culture 3h. Green: iCARΔ-Ms, Red: K562-CD5mcherry. Scale bar: 20μm. **(F)** Representative FACS analysis of CD5 and quantification of CD5 signal in Jurkat cells treated with 100 mg/mL cycloheximide (CHX) in the presence or absence of iCAR-Ms for the indicated times.

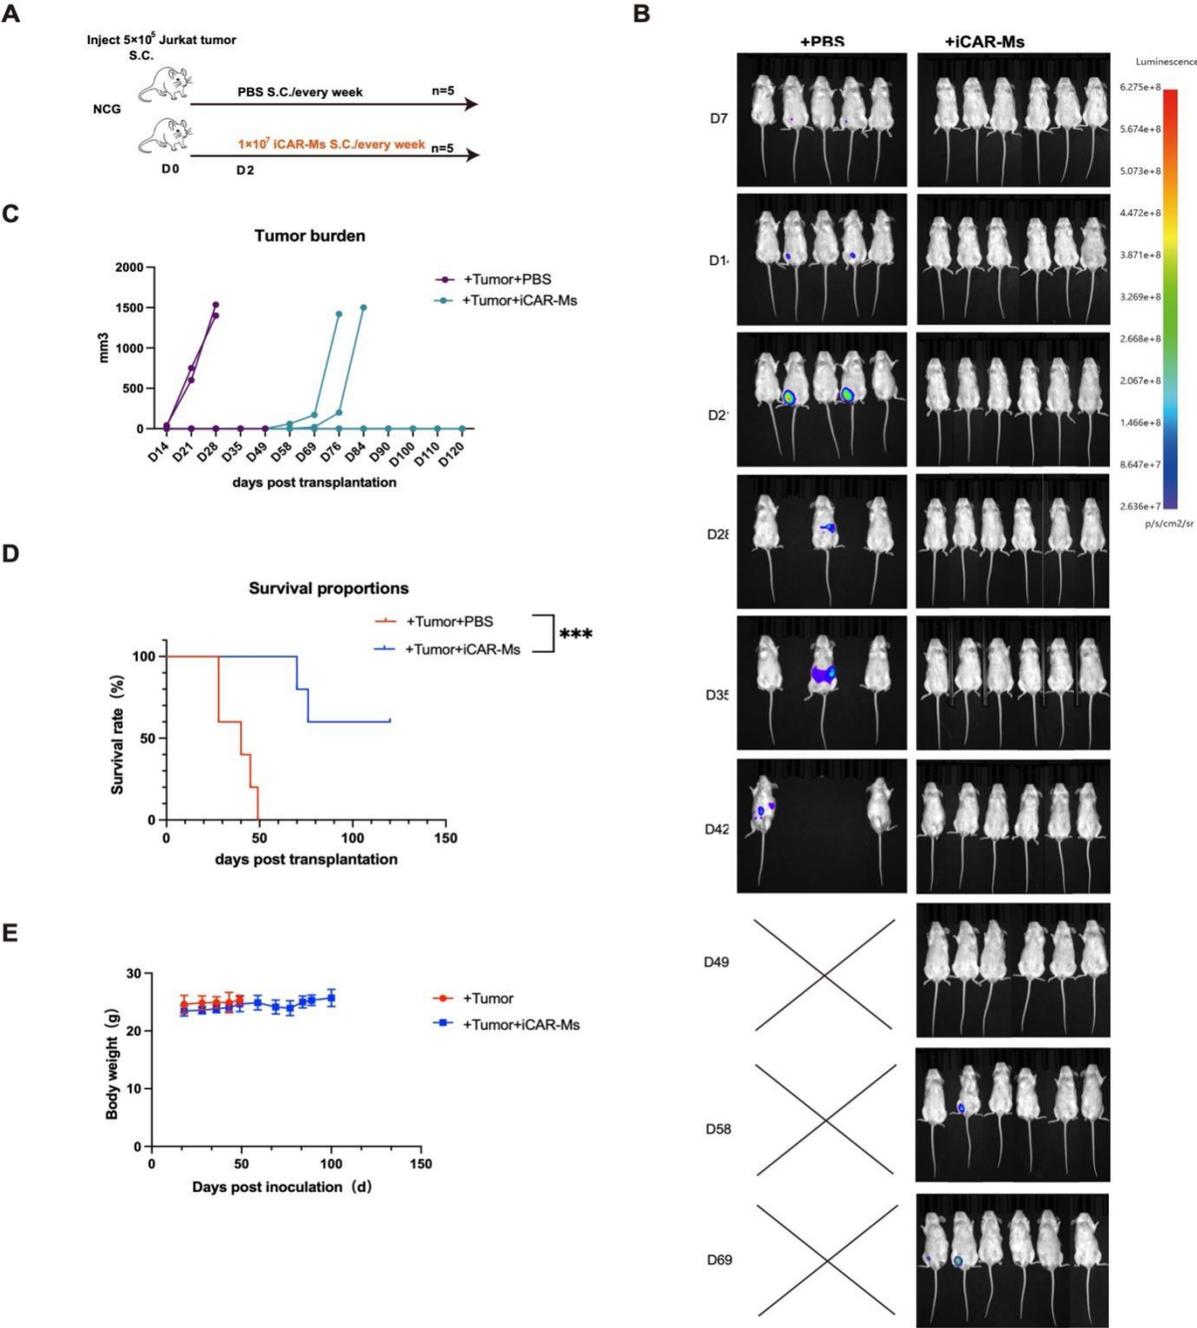

**Figure S4.**
**(A)** Experimental design: NCG mice were s.c. injected with luciferase_SUP-T1 and treated with s.c. PBS or iCAR-Ms as shown. **(B)** Imaging of luciferase-expressing SUP-T1 tumor-bearing mice. Tumor burden was measured by bioluminescence (total flux) at

indicated time. **(C)** Tumor burden monitored by measuring tumor volumes over 120 days. Each line represents 1 mouse. **(D)** Kaplan–Meier survival curve for animals injected with Jurkat tumor cells and indicated treatments. Statistical significance was calculated using the log-rank Mantel–Cox test. **(E)** Mouse weight monitoring. Data are represented as mean ± SD.

**Movie S1**. iCAR-M mediate trogocytosis on target tumor cells. iCAR-Ms stripped and internalized the cell-surface CD5-mCherry protein in co-culture. Green, iCAR-Ms; Red, K562-CD5mcherry. Scale bar: 10μm

**Movie S2.** iCAR-M mediate phagocytosis on target tumor cells. Green, iCAR-Ms; Red, K562-CD5mcherry. Scale bar: 10μm

**Movie S2**. iMACs has no interaction with tumor cells. iMACs(GFP overexpressing) co-culture with K562-CD5mcherry. Green, iMACs; Red, K562-CD5mcherry. Scale bar: 10μm

Supplemental Table 1 List of Chemicals and Antibodies

| REAGENT | SOURCE | IDENTIFIER |
|---|---|---|
| Antibodies | | |
| anti-CD3ζ antibody | Abcam | Cat# ab243874 |
| Goat anti rabbit IgG HRP | Abcam | Cat# ab6721 |
| HRP-conjugated GAPDH Monoclonal antibody | Proteintech | Cat# HRP-60004 |
| Mouse Anti-Human CD5 APC | Elabscience | Cat# E-AB-F1041E |
| Mouse Anti-Human CD5 PE | BD Biosciences | Cat# 561897 |
| Mouse Anti-Human CD11b APC-Cy7 | BD Biosciences | Cat# 560914 |
| Mouse Anti-Human CD14 PE | BD Biosciences | Cat# 561707 |
| Mouse Anti-Human CD80 APC | BD Biosciences | Cat# 565157 |
| Mouse Anti-HumanCD163 PE | BD Biosciences | Cat# 560933 |
| Mouse Anti-HumanCD206 BV421 | BD Biosciences | Cat# 566281 |
| Mouse Anti-HumanCD86 APC | BD Biosciences | Cat# 560956 |
| Chemicals and Recombinant Proteins | | |
| DMEM/F12 | Thermo Fisher Scientific | Cat# 11330-032 |
