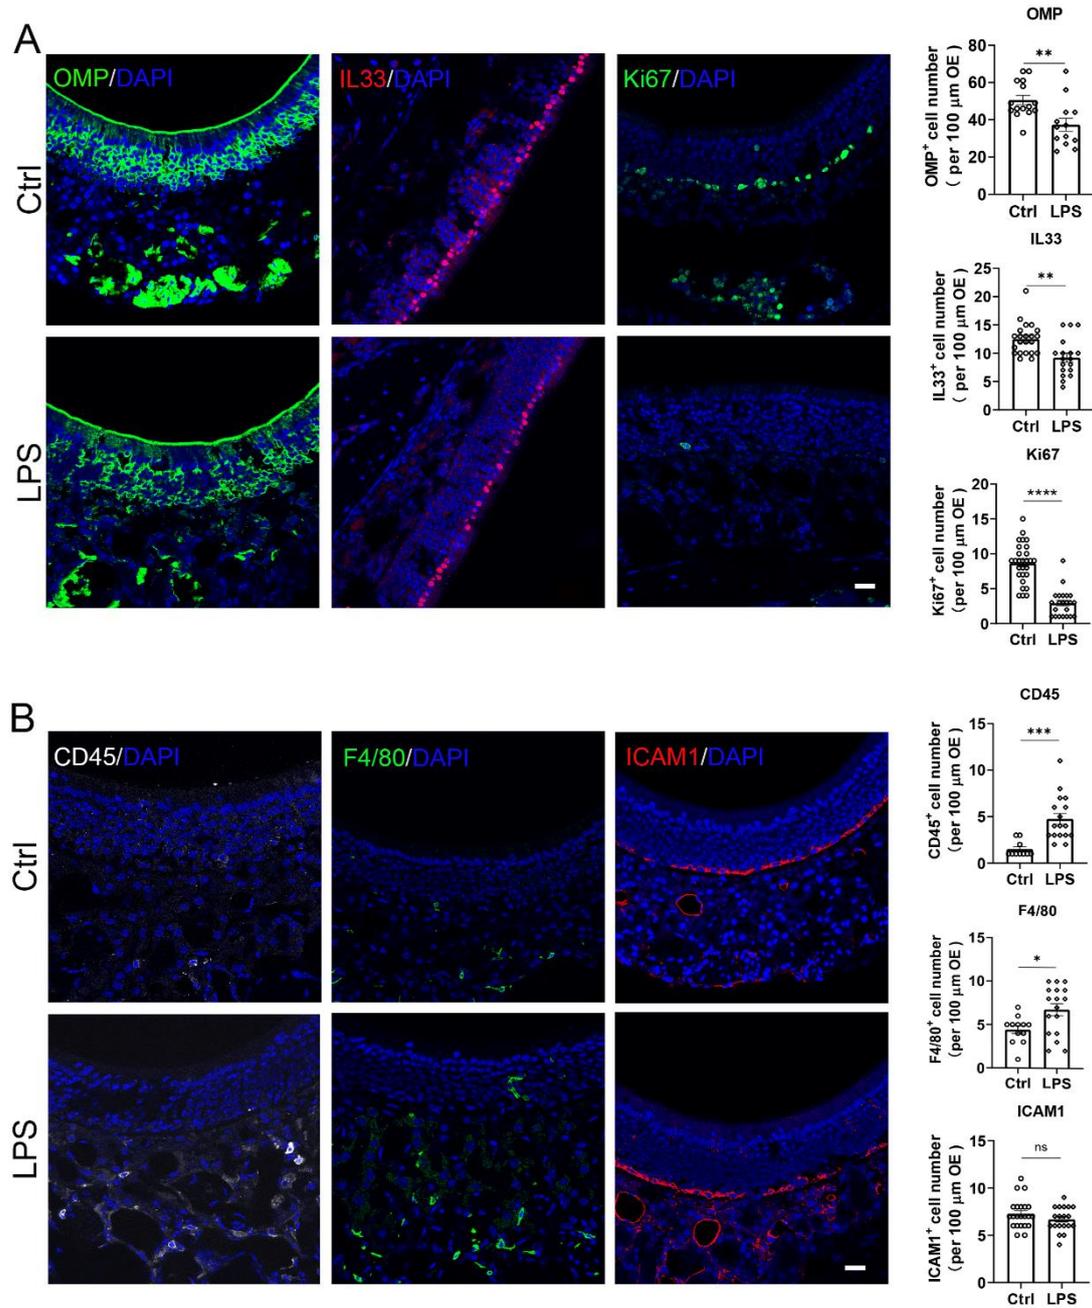

Figure S2. LPS instillation leads to cellular changes in the OE. Confocal images and quantifications of OMP<sup>+</sup>, IL33<sup>+</sup>, Ki67<sup>+</sup> (A), CD45<sup>+</sup>, F4/80<sup>+</sup>, ICAM1<sup>+</sup> (B) cells in the OE of saline and LPS-instilled mice. OMP<sup>+</sup>: n= 15 and 13 OE regions, IL33<sup>+</sup>: n=22 and 18, Ki67<sup>+</sup>: n=28 and 31, CD45<sup>+</sup>: n=10 and 17, F4/80<sup>+</sup>: n=12 and 17, ICAM1<sup>+</sup>: n=22 and 19. The statistical significances were determined by unpaired t test. ns, not significant, \*p < 0.05, \*\*p < 0.01, \*\*\*p < 0.001, \*\*\*\*p < 0.0001. Scales bars: 20 μm.

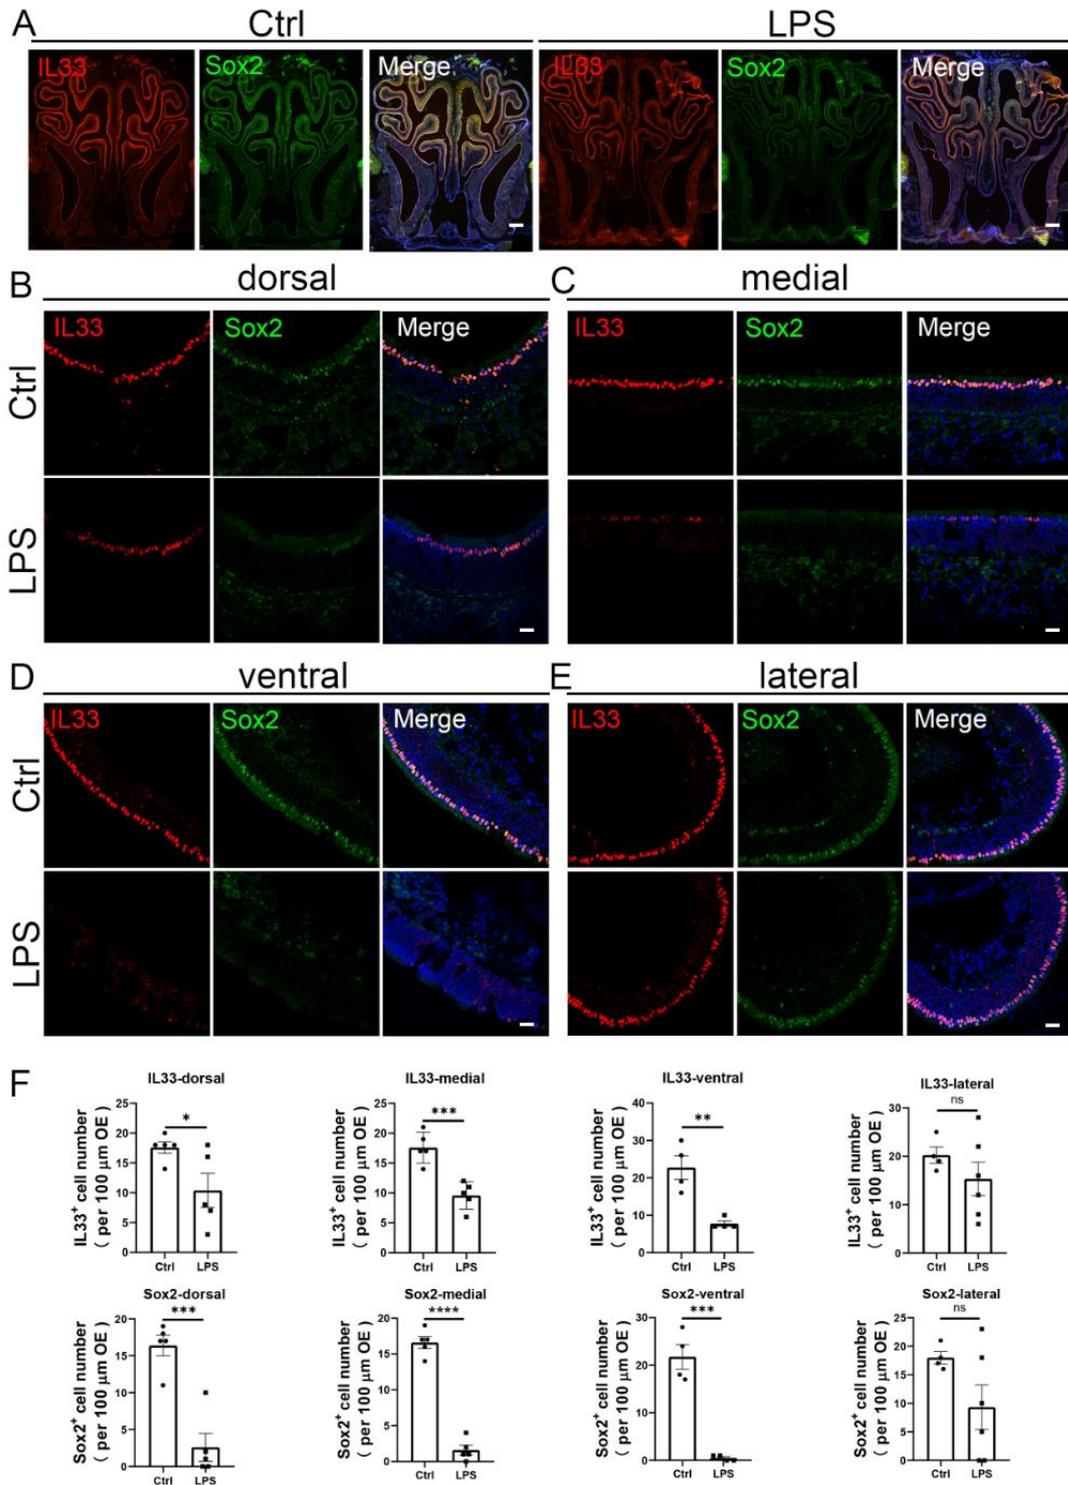

Figure S3. LPS instillation leads to regional loss of sustentacular cells in the OE. (A) Confocal images of IL33<sup>+</sup> and Sox2<sup>+</sup> cells in the whole OE section of control and LPS groups. (B-E) Confocal images of IL33<sup>+</sup> and Sox2<sup>+</sup> cells in dorsal (B), medial (C), ventral (D), and lateral (E) OE of control and LPS groups. (F) Quantification of IL33<sup>+</sup> and Sox2<sup>+</sup> cells in dorsal (B), medial (C), ventral (D), and lateral (E) OE of control and LPS groups. n = 4 – 6 regions. The statistical significances were determined by unpaired t test. ns, not significant, \*p < 0.05, \*\*p < 0.01, \*\*\*p < 0.001, \*\*\*\* p < 0.0001. Scales bars: 500 μm in (A), 20 μm in (B-E).

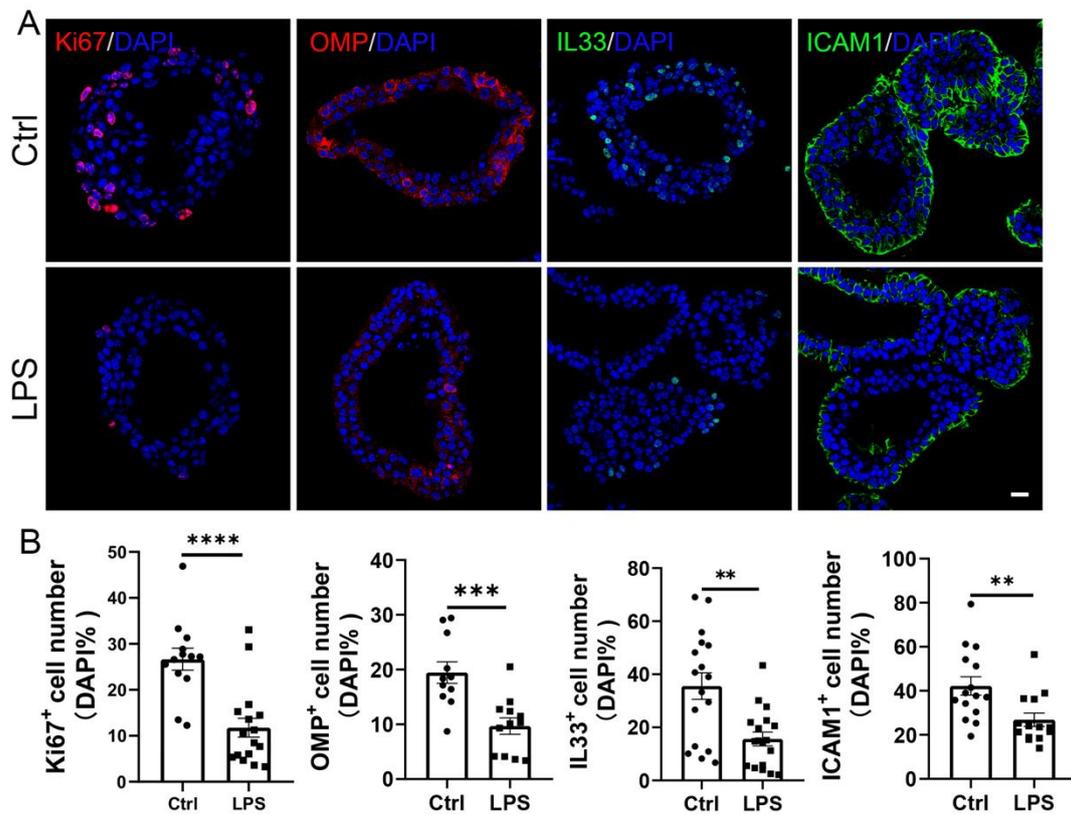

Figure S4. LPS treatment in vitro impairs cell proliferation and differentiation in OE organoids. (A, B) Confocal images (A) and quantification (B) of Ki67<sup>+</sup>, OMP<sup>+</sup>, IL33<sup>+</sup>, and ICAM1<sup>+</sup> cells in saline or LPS-treated organoids. Ki67<sup>+</sup>: n = 13 and 17 organoids in control and LPS group, OMP<sup>+</sup>: n = 11 and 12 organoids, IL33<sup>+</sup>: n = 17 and 18 organoids, ICAM1<sup>+</sup>: n = 15 and 14 organoids. The statistical significances were determined by unpaired t test. \*\* p < 0.01, \*\*\* p < 0.001, \*\*\*\* p < 0.0001. Scales bar: 20  $\mu$ m.

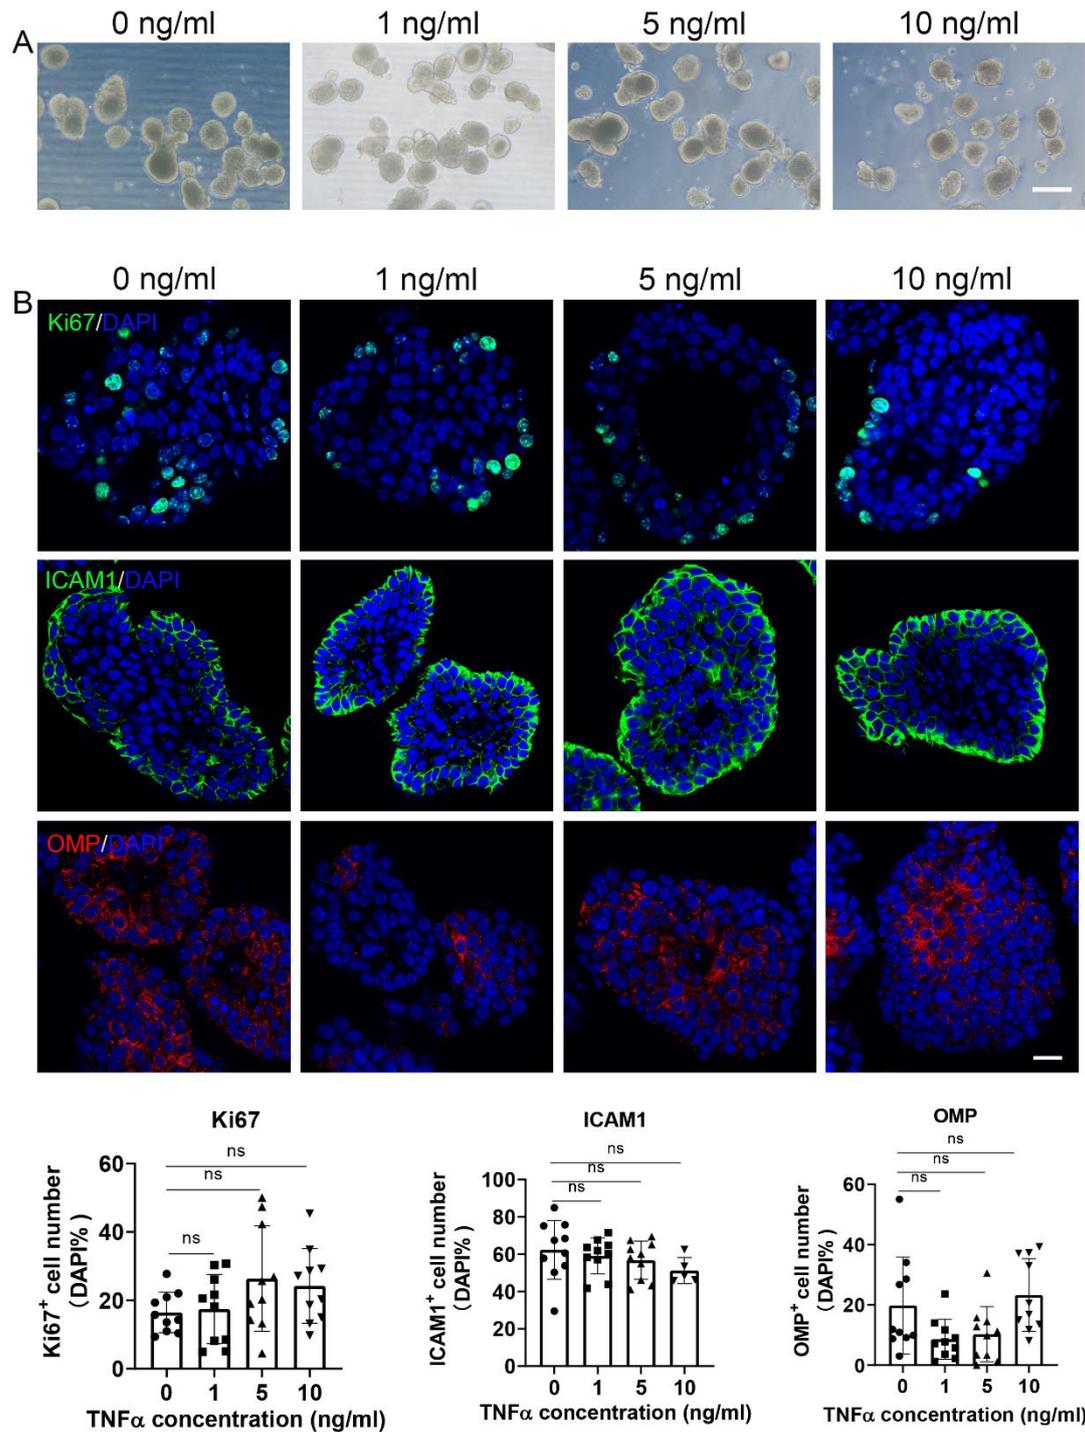

Figure S5. TNF $\alpha$  exposure for 24 h does not affect cell proliferation and neuronal maturation in OE organoids. (A) Microscopic images of OE organoids treated with 0, 1, 5, 10 ng/ml TNF $\alpha$  for 24 h. (B) Confocal images and quantification of Ki67<sup>+</sup>, ICAM1<sup>+</sup>, OMP<sup>+</sup> cells in OE organoids treated with 0, 1, 5, 10 ng/ml TNF $\alpha$  for 24 h. Ki67<sup>+</sup>: n= 10 organoids in each group, ICAM1<sup>+</sup>: n=10, 10, 10, 5 organoids, OMP<sup>+</sup>: n= 10 organoids in each group. The statistical significances were determined by one-way ANOVA with Dunnett's multiple comparisons test. ns, not significant. Scales bars: 200  $\mu$ m in (A), 20  $\mu$ m in (B).

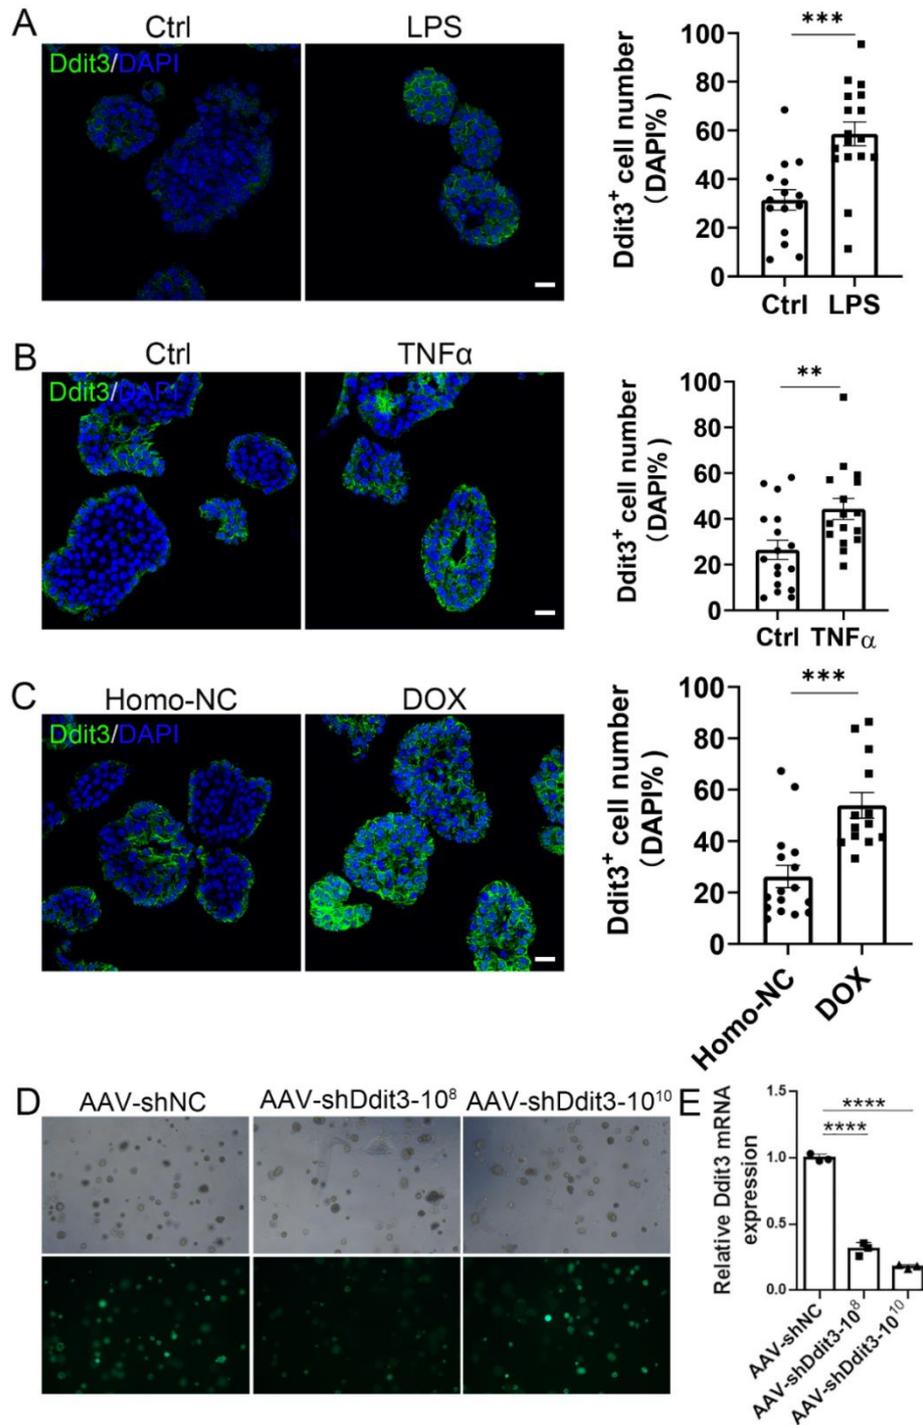

Figure S7. Increase in Ddit3<sup>+</sup> cells in inflammatory OE organoid models. (A-C) Confocal images and quantifications of Ddit3<sup>+</sup> cells in LPS- (A), TNF $\alpha$ - (B) treated OE organoids from WT mice, DOX-treated (C) organoids from Cyp2g1-rtTA/ TRE-TNF $\alpha$  mice. LPS: n= 15 and 17 organoids in control and treated group, TNF $\alpha$ : n= 17 and 16, DOX: n=16 and 13. (D) Microscopic images of OE organoids infected with AAV-shNC and AAV-shDdit3. (E) Quantitative PCR analysis showing Ddit3 expression levels in OE organoids infected with AAV-shNC and AAV-shDdit3. n= 3 preparations. The statistical significances were determined by unpaired t test in (A-C), and by one-way ANOVA with Dunnett's multiple comparisons test in (E). \*\*p < 0.01, \*\*\*p < 0.001, \*\*\*\*p < 0.0001. Scales bars: 20  $\mu$ m.

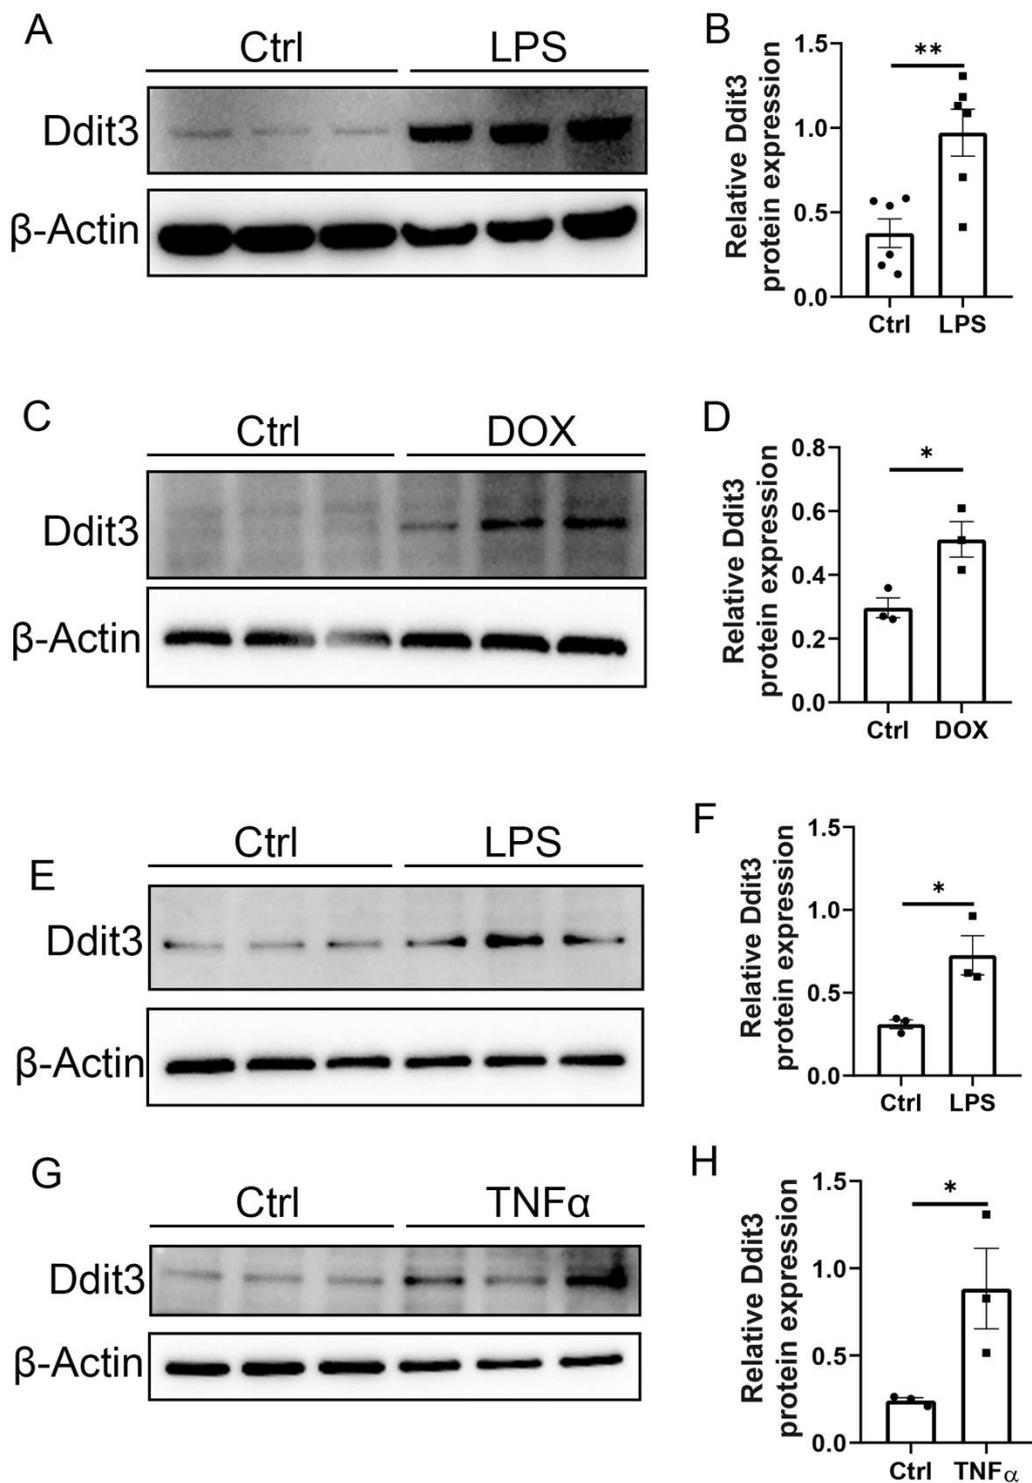

Figure S8. Upregulation of Ddit3 in the OE of inflammatory mouse model and inflammatory organoids. (A-D) Western blot gel images and quantification data of Ddit3 expression in the OE of control and LPS-instilled WT mice (A, B), of untreated and Dox-treated Cyp2g1-rtTA/ TRE-TNF $\alpha$  mice (C, D). (E-H) Western blot gel images and quantification data of Ddit3 expression in control and LPS-treated organoids (E, F), in untreated and TNF $\alpha$ -treated organoids (G, H). The statistical significances were determined by unpaired t test. \* $p < 0.05$ , \*\* $p < 0.01$ .  $n = 3$  experiments.

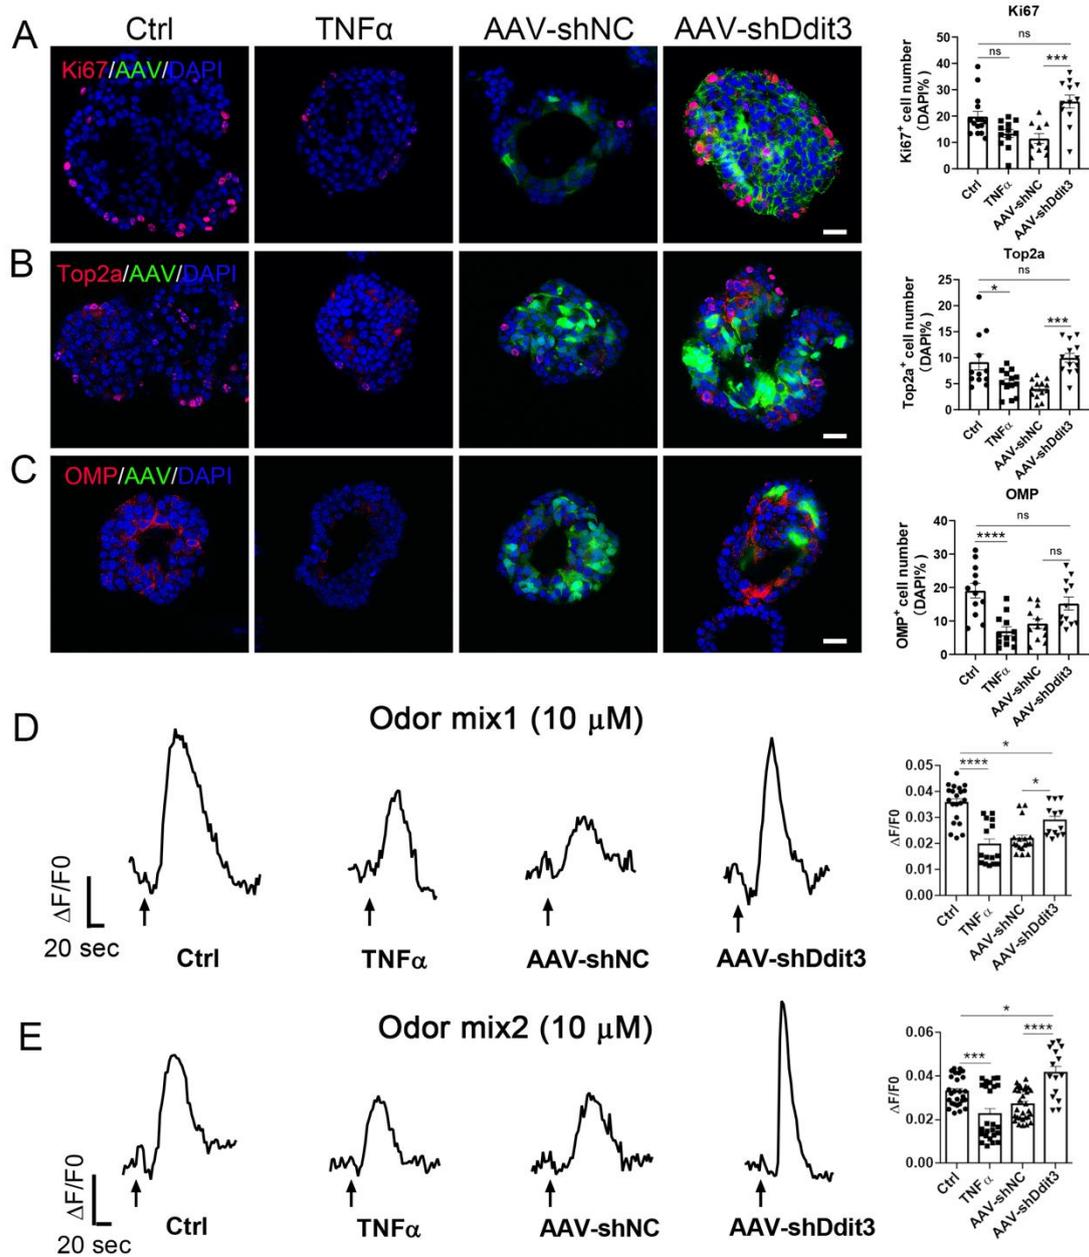

Figure S9. Ddit3 downregulation counteracts the effect of TNF $\alpha$  in OE organoids. (A-C) Confocal images and quantification of Ki67<sup>+</sup> (A), Top2a<sup>+</sup> (B), OMP<sup>+</sup> (C) cells in OE organoids treated with saline or TNF $\alpha$ , and in TNF $\alpha$ -treated organoids infected with AAV-shNC or AAV-shDdit3. Ki67<sup>+</sup>: n= 15, 12, 10, 12 organoids in control, LPS, LPS+shNC, LPS+shDdit3 group, Top2a<sup>+</sup>: n= 12, 13, 13 organoids, OMP<sup>+</sup>: n= 12 organoids in each group. (D, E) Representative calcium imaging curves of OE organoids treated with saline or TNF $\alpha$ , and in TNF $\alpha$ -treated organoids infected with AAV-shNC or AAV-shDdit3, stimulated with odor mix1 (D) and mix2 (E). Quantifications of calcium imaging data were shown at the right. Mix1: n= 21, 15, 17, 13 recordings in control, TNF $\alpha$ , TNF $\alpha$ +shNC, TNF $\alpha$ +shDdit3 group, Mix2: n= 27, 25, 30, 15 recordings. The statistical significances were determined by one-way ANOVA with Tukey's multiple comparisons test. ns, not significant, \*p < 0.05, \*\*\*p < 0.001, \*\*\*\*p < 0.0001. Scales bars: 20  $\mu$ m.

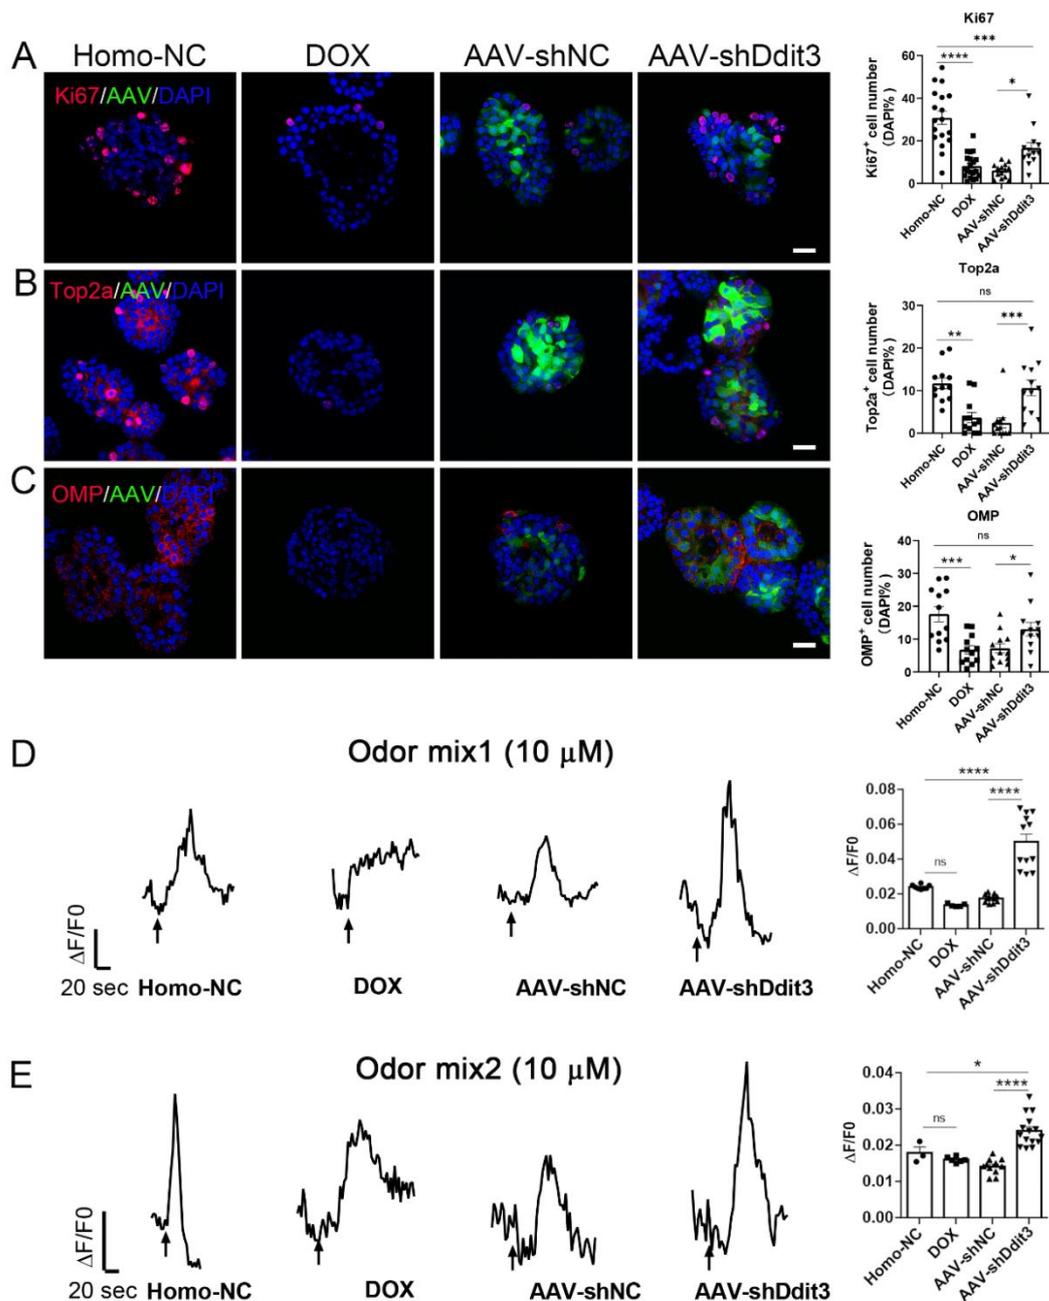

Figure S10. Ddit3 downregulation counteracts the effect of inducible TNF $\alpha$  in OE organoids. (A-C) Confocal images and quantification of Ki67<sup>+</sup> (A), Top2a<sup>+</sup> (B), OMP<sup>+</sup> (C) cells in OE organoids treated with saline or DOX, and in DOX-treated organoids infected with AAV-shNC or AAV-shDdit3. Ki67<sup>+</sup>: n= 18, 20, 14, 13 organoids in control, LPS, LPS+shNC, LPS+shDdit3 group, Top2a<sup>+</sup>: n= 12 organoids in each group, OMP<sup>+</sup>: n= 12, 12, 12, 11 organoids. (D, E) Representative calcium imaging curves of OE organoids treated with saline or DOX, and in DOX-treated organoids infected with AAV-shNC or AAV-shDdit3, stimulated with odor mix1 (D) and mix2 (E). Quantifications of calcium imaging data were shown at the right. Mix1: n= 8, 5, 12, 12 recordings in control, DOX, DOX+shNC, DOX+shDdit3 group, Mix2: n= 3, 6, 11, 15 recordings. The statistical significances were determined by one-way ANOVA with Tukey's multiple comparisons test. ns, not significant, \*p < 0.05, \*\*p < 0.01, \*\*\*p < 0.001, \*\*\*\* p < 0.0001. Scales bars: 20  $\mu$ m.

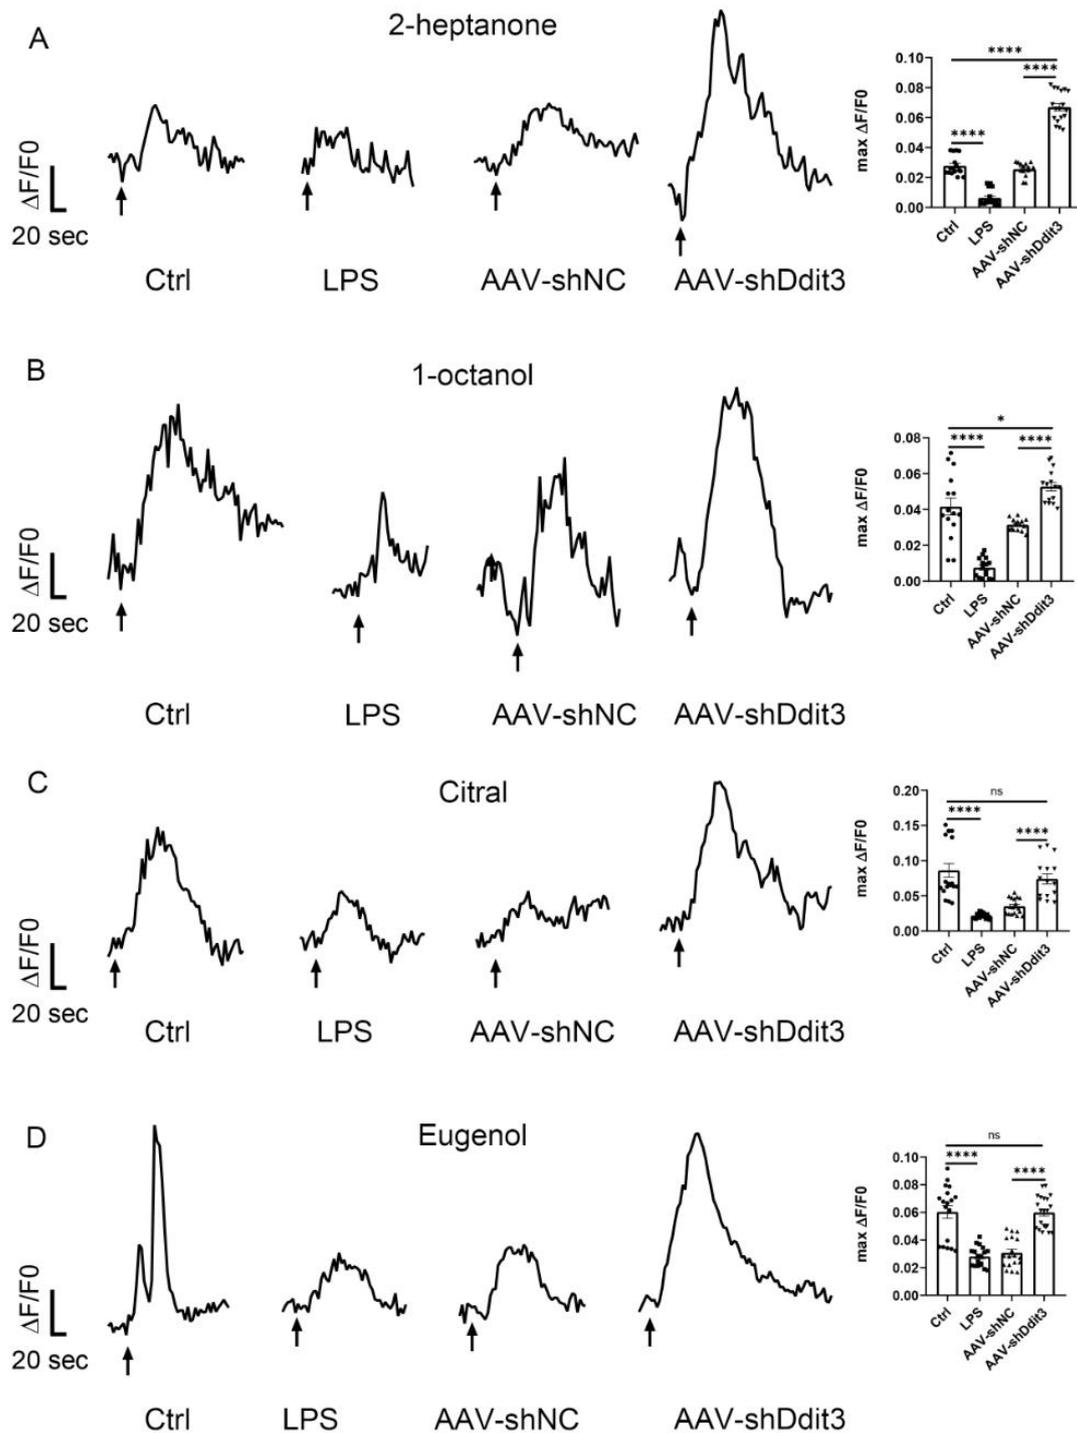

Figure S11. Ddit3 downregulation recovers response to single odorant in LPS-treated organoids. (A-D) Representative calcium imaging curves of OE organoids treated with saline or LPS, and in LPS-treated organoids infected with AAV-shNC or AAV-shDdit3, stimulated with 2-heptanone (A), 1-octanol (B), citral (C), eugenol (D). Quantifications of calcium imaging data were shown at the right. 2-heptanone: n= 16, 16, 14, 18 recordings in control, LPS, LPS+shNC, LPS+shDdit3 group, 1-octanol: n= 15 recordings in each group, citral: n= 18, 18, 17, 15 recordings, eugenol: n= 18, 18, 18, 21 recordings. The statistical significances were determined by one-way ANOVA with Tukey's multiple comparisons test. ns, not significant, \* $p < 0.05$ , \*\*\*  $p < 0.0001$ .

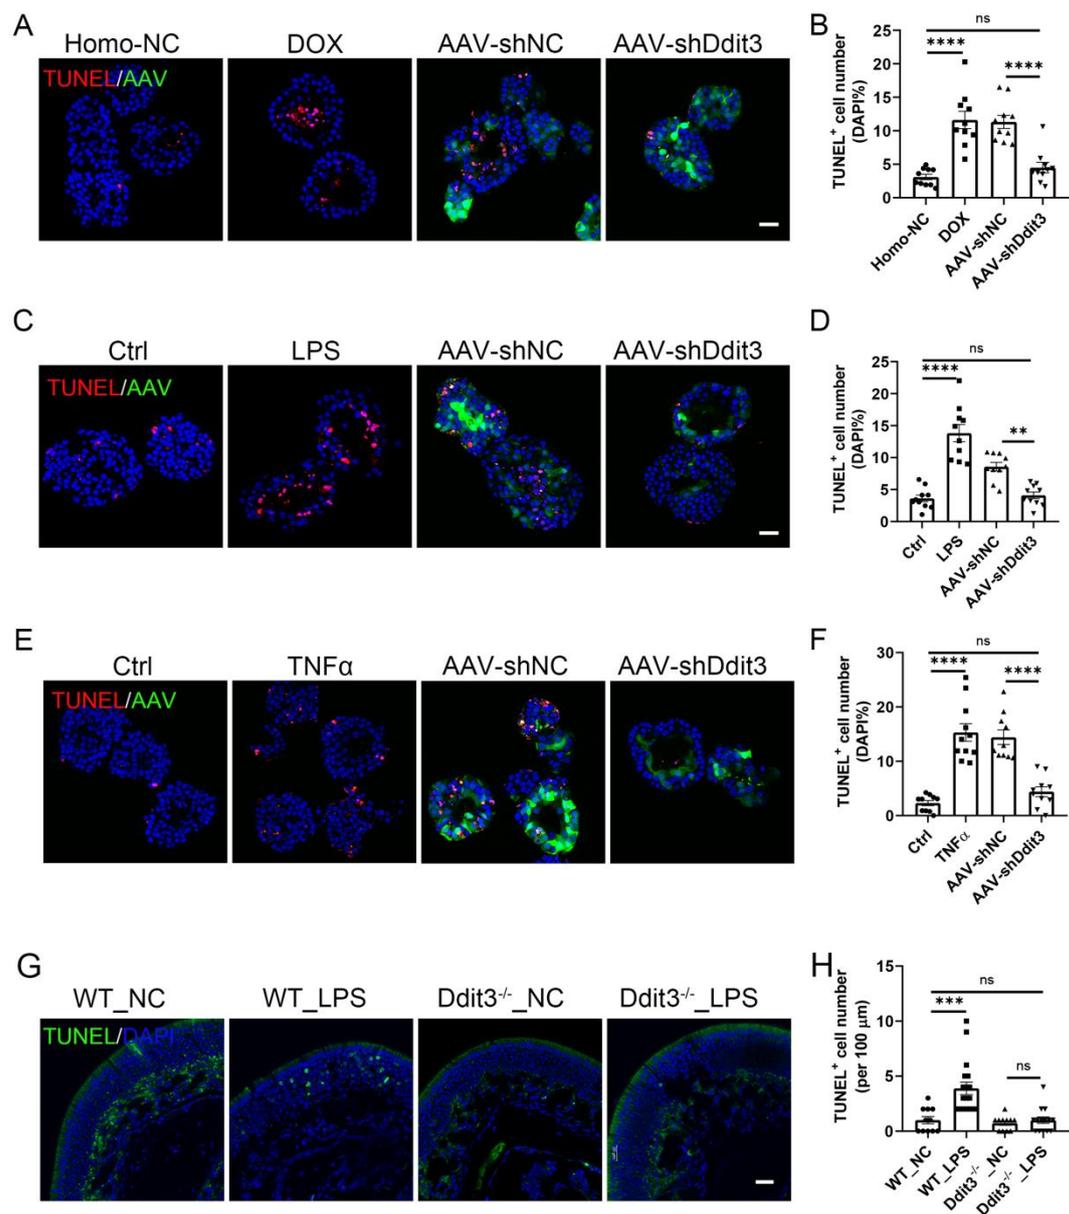

Figure S12. Ddit3 deficiency or downregulation alleviates the apoptosis in the inflammatory models. (A-F) Confocal images and quantification of TUNEL<sup>+</sup> cells in Dox-induced (A, B), LPS-treated (C, D), TNF $\alpha$ -treated (E, F) organoids with AAV-NC or AAV-shDdit3 infection. n= 10 organoids in each group. (G, H) Confocal images (G) and quantification (H) of TUNEL<sup>+</sup> cells in the OE of saline or LPS-instilled WT and Ddit3<sup>-/-</sup> mice. n= 11, 18, 11, 14 OE regions in WT\_NC, WT\_LPS, Ddit3<sup>-/-</sup>\_NC, Ddit3<sup>-/-</sup>\_LPS group. The statistical significances were determined by one-way ANOVA with Tukey's multiple comparisons test. ns, not significant, \*\*p < 0.01, \*\*\*p < 0.001, \*\*\*\*p < 0.0001. Scales bars: 20  $\mu$ m.

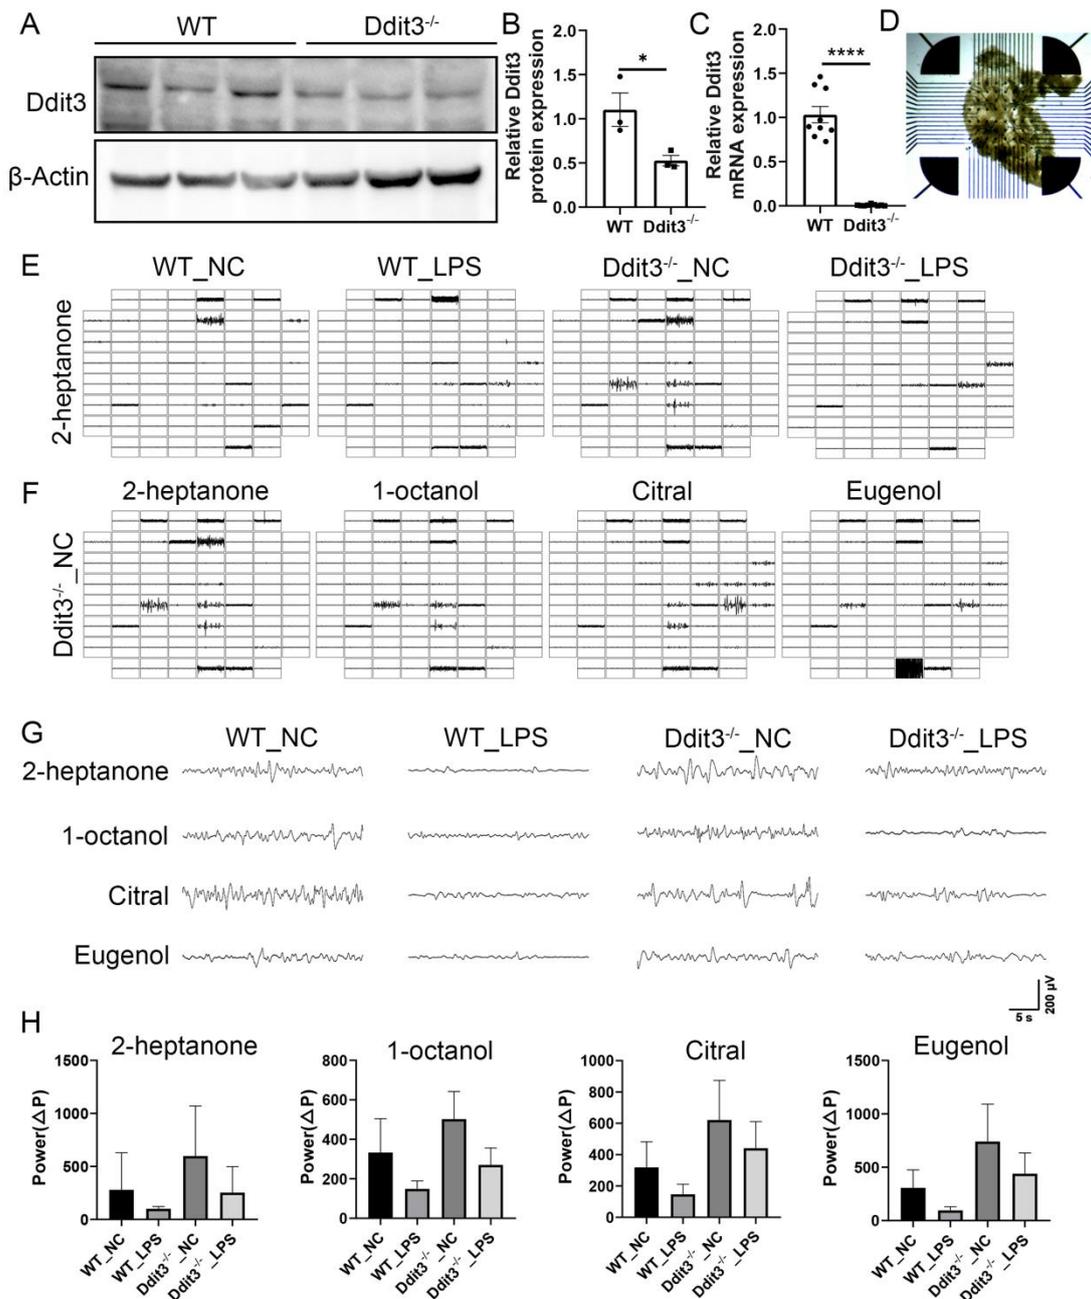

Figure S13. Ddit3 deficiency recovers the electrophysiological response to single odorants in the OE of LPS-instilled mice. (A, B) Western blot band image (A) and quantification (B) showing Ddit3 expression level in the OE of WT and Ddit3<sup>-/-</sup> mice. (C) Quantitative PCR data of Ddit3-mRNA expression level in the OE of WT and Ddit3<sup>-/-</sup> mice. (D) Images of MEA system with OE tissue. (E) Original response curves to 2-heptanone in multiple OE regions of saline or LPS-instilled WT mice, and saline or LPS-instilled Ddit3<sup>-/-</sup> mice. (F) Original response curves to four different single odorants in the OE of saline-treated Ddit3<sup>-/-</sup> mice. (G) Representative response curves to four single odorants by MEA in the OE of saline or LPS-instilled WT mice, and saline or LPS-instilled Ddit3<sup>-/-</sup> mice. (H) Quantification of the  $\Delta P$  of the response to 2-heptanone, 1-octanol, citral, eugenol by MEA. n = 4 OE tissues in each group.
